

SPUD Tub™

Self-Contained Potato Garden Kit
by City Pickers™

Yield approximately 70 potatoes in 100 days.

Dependent on Species. Results May Vary.

The **SPUD Tub™** Self-Contained Potato Garden Kit by City Pickers™ is used by gardeners who do not have a patch of earth for growing their own potatoes and who want to control what, if any, fertilizer is used in growing their food.

The compact lines of the design allow it to fit in anywhere – porches, patios, condos, and more. It's perfect for anyone who doesn't have a garden!

SPUD Tub is a self-contained growing unit.

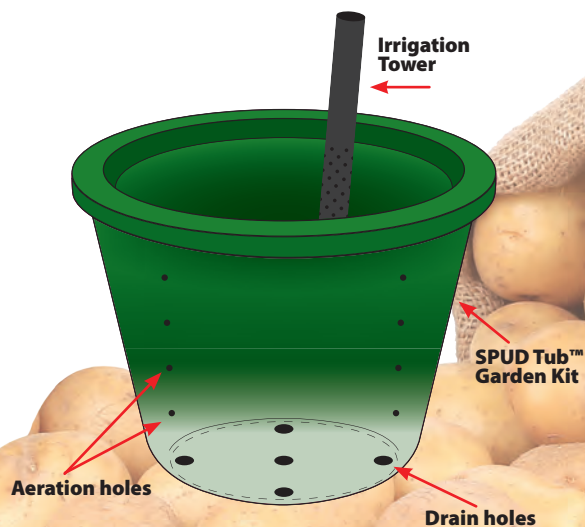

The aeration and watering system gives the growing plants the proper amount of air and water needed to promote good growth.

The aeration holes on the sides and larger drainage holes on the bottom prevent root rot and mold typically found in other commercial or homemade boxes.

The irrigation tower ensures that the root system is supplied with just the right amount of water to maintain and promote new growth as the plant matures.

Harvesting is easy!

At the end of the growing season, just tip your SPUD Tub over onto a tarp and collect your harvest.

#2351

SPUD Tub™
